1. (Amended) A semiconductor device having a first vertical type bipolar transistor and a second vertical type bipolar transistor having a breakdown voltage that is higher than a breakdown voltage of the first vertical type bipolar transistor, said transistors each having an emitter, a base, and a collector, the semiconductor device comprising:

a substrate of a first conductive type;

an epitaxial layer formed on the substrate;

a first embedded diffusion layer formed as a part of the first vertical type bipolar transistor in a first upper part of the substrate and in the epitaxial layer;

a second embedded diffusion layer formed as a part of the second vertical type bipolar transistor directly on the substrate, in a second upper part of the substrate,

wherein the first embedded diffusion layer is not disposed within the second embedded diffusion layer,

wherein the second embedded diffusion layer is of a second conductive type that is a different conductive type from the first conductive type substrate and includes an impurity
